EXPERIENCE

ADVANCED TRAINING IN DATA ANALYSIS AND MACHINE LEARNING.

ANALYSING DATASETS ON DRINKING WATER QUALITY

Analysed the dataset and the relationships between its variables, using manipulation and visualisation techniques in Data Science

- Completed the exploratory analysis ETL, EDA
- Set up the prediction problem
- Training ML Models
- Model evaluation
- Compared multiple models Models using RandomForest and XGBoost

ANALYSING STRUCTURAL GEOLOGY AND HYDROGEOLOGY

Exploring and collecting data to find relationships and brings data into maps, using manipulation data analysis and geospatial, geostatistical techniques. Predictions of Earth hazards and risk assessment. Environmental and mineral exploration.

- Analysis and Elaborate in GIS
- Set patterns and predict solution
- Lab Techniques; Thin-section analysis, XRD, SEM

SPATIAL PLANNING AND DESIGN FOR CLIMATE CHANGE

Study of the environmental planning techniques used to adapt and prepare cities for reducing and successfully managing the risk of flooding deriving from climate change

- Analysed the international policies resulting from the cooperation between different states affected by common flooding events
- Examined the social, environmental, and economic impacts arose by the goals and strategies adopted by the countries involved

ENVIRONMENTAL PLANNING STUDIO

Study of the environmental adaptation planning techniques. Case; Enhance Sustainable tourism in the seaside city, Bibione.

- Analysed the different compound of the city
- Find a plausible solution related to our case of study
- Predict the consequences of the action

IDENTIFICATION, EVALUATION AND MODELLING OF URBAN HEAT ISLANDS (UHI) IN URBAN AREAS

Study to locate the high temperature spots in canopy layer of the urban areas of Venice and Vicenza

- Created and exported isotherm maps starting from multispectral images

- Aggregated pixels in classes according to their intrinsic attribute value to extract the Normalized Difference Vegetation Index (NDVI)

CALCULATE THE LAND CONSUMPTION ANALYSING THE SATELLITE IMAGES USING GIS SOFTWARE.

Assign the correct land consumption types to the Beijing (China) urban area in order to find the best strategies to improve the quality of the city environment

- Created reports including images exported from GIS maps
- Applied algorithms to differentiate land types based on raster data
- Classified the land uses in urban areas

DEVELOPER

BUILDING COMPLETE WEB APPLICATIONS

Handling both front-end(client-side) and back-end(server-side) development, as well as database management.

KEY SKILLS

- Strong background in environmental planning of urban areas using multidisciplinary approach (demographic, new policies, statistics and territorial)
- Strong background in Geospatial Analysis
- Strong background in Geochemical separation of minerals
- Strong background in Geophysical surveys (seismic) and hazard prediction
- Experience in Risk Reduction, Disaster Planning and Post-Disaster Rebuilding
- Theoretical knowledge in Logistics and Supply Chain Management
- Extensive experience in Remote Sensing and treatment of the data and images from Sentinel and Landsat satellite
- Very fast in learning new hardware, software and techniques
- Problem-solving and teamwork.
- Enthusiastic about learning from different disciplines

KEY IT SKILLS

Full Stack Developer

- Development and Projects in multiple programming languages with end-to-end competencies.
- Frontend: JavaScript, TypeScript, Angular, HTML5, CSS3, Sass.
- Backend: Node.js, Python, Java.
- Database: SQL (MySQL, PostgreSQL).
- DevOps: Docker.
- CI/CD: GitHub Actions, GitLab.
- Architectures: RESTful APIs, microservices, cloud-native.
- Strong focus on performance and best practices.
- Ability to manage complex projects from design to deployment, ensuring clean, scalable, and maintainable code.

Master in Data Science

- Skills in: Python programming (Pandas, NumPy, scikit-learn), R (ggplot2, xts, gstat), SQL.
- Statistical modeling, regression, classification, clustering.
- Deep learning with TensorFlow.
- Data visualization: Matplotlib, Seaborn, Tableau.
- Data engineering, data mining, ETL, EDA.
- Management of complex datasets, validation of predictive models.
- Hands-on experience in business intelligence and predictive analytics projects.
- Ability to translate business problems into data-driven solutions with a scientific approach.
- Strong mathematical and statistical foundations

Geology

- QGIS /ArcGis
- ER Mapper/eCognition
- Adobe Creative package (Illustrator, InDesign, Photoshop)
- Canva, DataViz

LANGUAGES

Italian/Albanian: Bilingual

English: Fluent (IELTS Academic B2)

Spanish: Fluent

German: Basic

EDUCATION

2024- Oct 2025 Corso Full Stack Developer - LabforWeb

2022- July 2023 Master in Data Science Neural Academy

2018- 2020 Planning and Policies for Cities, Environment and Landscape – New Technologies for Planning (master’s degree course)
IUAV University of Venice (Università Iuav di Venezia – Italy)

2010 BACHELOR OF SCIENCE (BSc) IN GEOLOGICAL SCIENCES
University of Padua (Università degli Studi di Padova – Italy)

ACTIVITIES AND INTERESTS

Sàpere aude

Passionate about data

Sciences in general

Running, Swimming, Hiking, Crossfit.
